

Alternate Item Layouts

In QL2, report templates can contain multiple item layouts to suite any number of presentation needs. For example, imagine an estate appraisal where you have a mix of high value items along with groupings of items at scrap value. The former items probably require complex descriptions and details whereas; the latter might only warrant a brief description. Different layouts can be created that allow you to present the data exactly as desired!

When a template contains multiple layouts, the desired layout may be selected from the “Named Layout” list within the properties of each selected item.

The value of this item is based on a comparable new item. For the intended use of this report and chosen value type, the cost approach to value was utilized by analyzing anticipated wholesale costs of materials and labor to which was applied the modal markup to retail. Due to the quality, condition, and relative ranking of this item within its class, the relevant market chosen was the primary retail, brick and mortar, single-store level of the gems and jewelry trade. The overall value trend in that market within reasonable proximity to the valuation date was generally stable.
